UPDATE RECORD

5. Please update with relevant Icons to Menu and Inner Pages within whole UI/UX designs of the system.

6. **Localization Settings Page**, please make changes as below:
- a. Change Label “Select Category” to “Decimal Numbers”

- b. Only positive integer values should be accepted, please change accordingly

c. Date Format, please remove not required options and add required formats

The screenshot shows the 'Localization Settings' page. The 'Date format' dropdown menu is open, displaying several options. Two options, '15-08-2023' and 'Aug 15, 2023', are highlighted with red boxes. A red box labeled 'Not Required!' has two arrows pointing to these two options. Other options in the dropdown include '-- Select Date Format --', '08-15-2023', '2023-08-15', '15 Aug 2023', '2023/08/15', and 'Tuesday, August 15, 2023'. The 'Default system Language' is set to 'English'. The 'Currency position' is set to 'Left'. There is an 'UPDATE RECORD' button at the bottom.

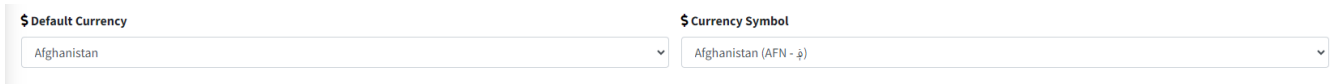

Required Date format: dd.mm.yyyy , dd/mm/yyyy

d. Time format changes

The screenshot shows the 'Localization Settings' page. The 'Time Format' dropdown menu is open, displaying three options: '-- Select Time Format --', '12-hour (h:mm AM/PM)', and '24-hour (H:mm)'. The 'Default Page' is set to 'Welcome Page'. The 'Currency Symbol' is set to 'Afghanistan (AFN - ₰)'. The 'Decimal separator' is set to 'Dot'. There is an 'UPDATE RECORD' button at the bottom.

Required Time format: HH:mm

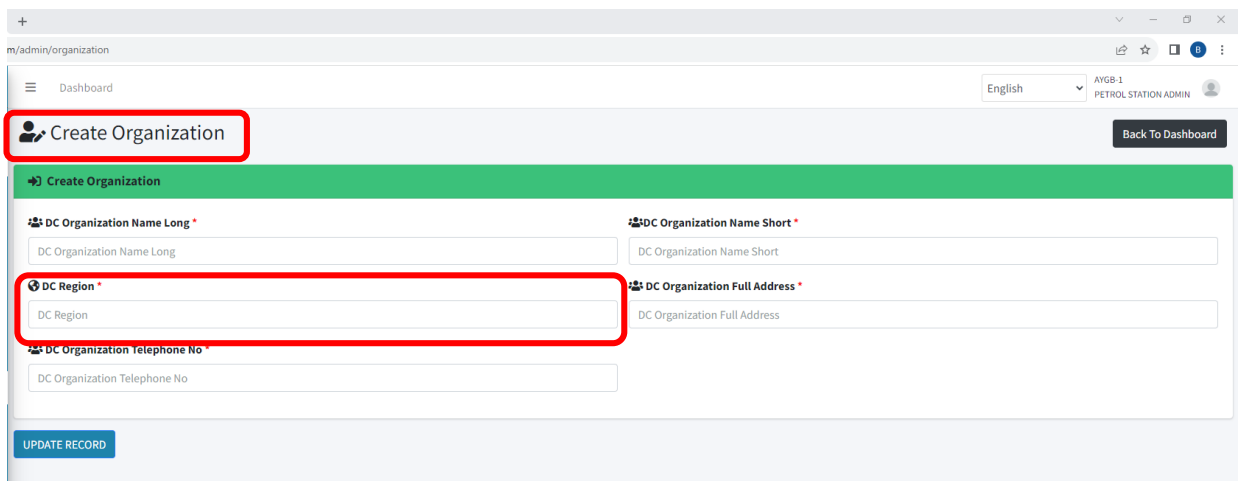

- e. For Currency Settings create similar Tab Page as you did for Decimal Number (currently labeled as Select Category). The page design and feature should be similar also. And we do not need a list of global currency and symbols, instead we will be creating custom currency like : Turkmen Manat, symbol MNT, United States Dollar, symbol USD.

This screenshot shows a form for currency settings. It has two dropdown menus. The first is labeled '\$ Default Currency' and has 'Afghanistan' selected. The second is labeled '\$ Currency Symbol' and has 'Afghanistan (AFN - ⬮)' selected.

7. Create Organization Page

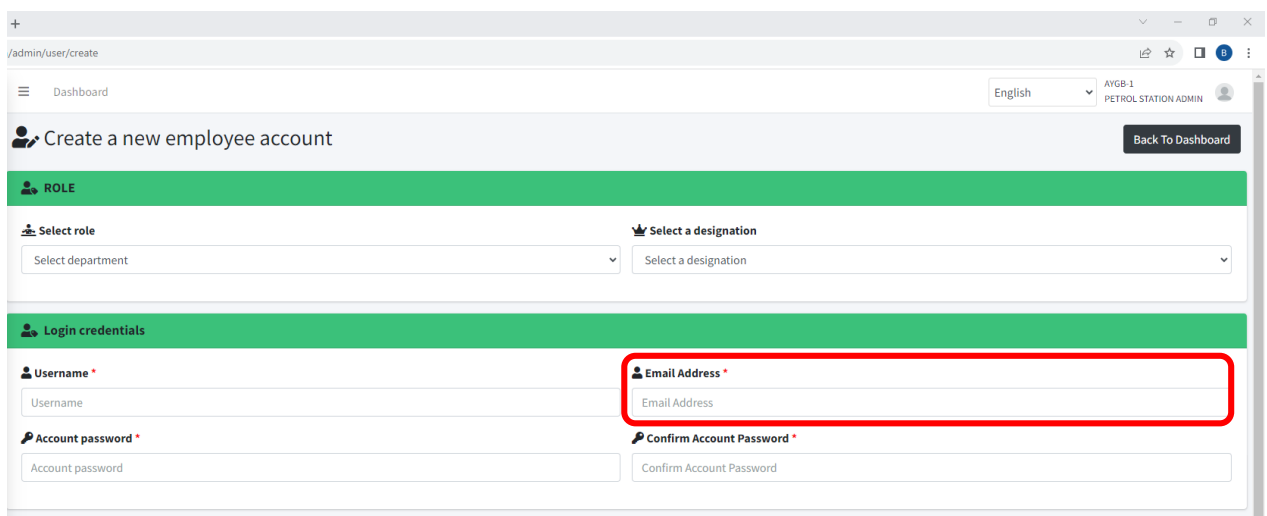

- a. Rename Label “Create Organization” to Organization
b. “DC Region” field should be drop down look up

This screenshot shows the 'Create Organization' page in a web application. The page has a header with a 'Dashboard' link and a 'Create Organization' button, which is highlighted with a red box. Below the header, there is a form with several fields: 'DC Organization Name Long', 'DC Organization Name Short', 'DC Region' (highlighted with a red box), 'DC Organization Full Address', and 'DC Organization Telephone No'. There is an 'UPDATE RECORD' button at the bottom.

8. Access and Permission UI/UX designs are not completed yet! Please complete them !

- a. Create new employee/user page should not have e-mail field.

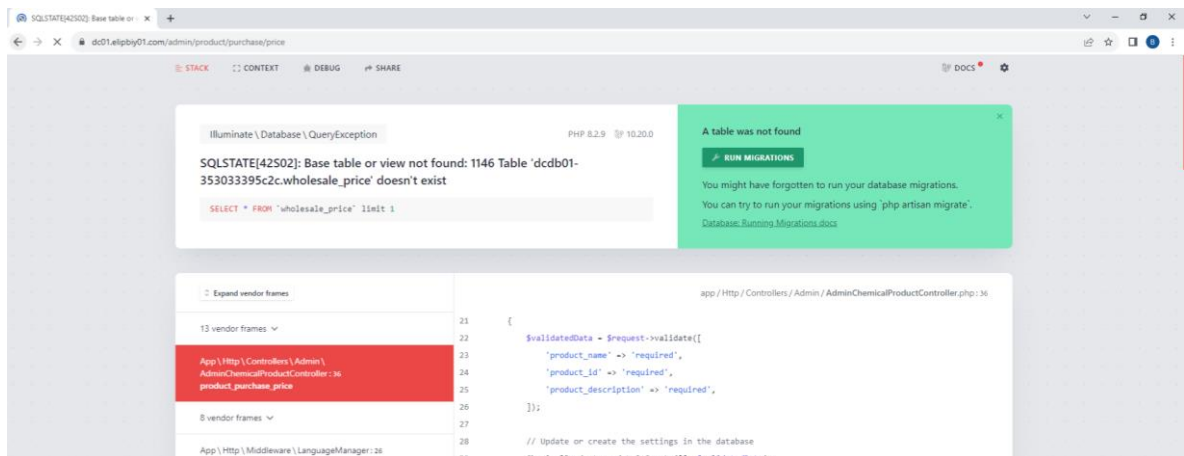

This screenshot shows the 'Create a new employee account' page. The page has a header with a 'Dashboard' link and a 'Create a new employee account' button. Below the header, there is a form with several sections: 'ROLE' with 'Select role' and 'Select a designation' dropdowns, and 'Login credentials' with 'Username', 'Email Address' (highlighted with a red box), 'Account password', and 'Confirm Account Password' fields.

b. Name field should be separated to Name and Surname fields.

The screenshot shows a web form titled "Account Details". It contains several input fields: "Name", "Home Phone Number", "Date Of birth", "Date Of Joining", and "Home Address". The "Name" field is highlighted with a red rectangle, indicating it is the focus of the feedback.

9. Purchase Price Page is crushing!

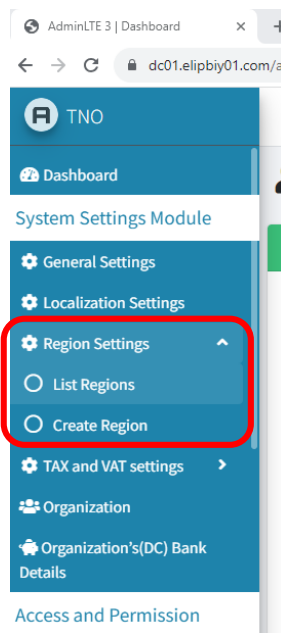

10. Whole Sale Price and Retail Price should have Price Group Field!

The screenshot shows the "Wholesale Sale Price" form in the AdminLTE 3 dashboard. The form is divided into two columns. The left column contains fields for "Wholesale Sale Price ID", "Wholesale Sale Price Chemical Product", "Wholesale Sale Price without TAX(VAT)", "Wholesale Sale Price Currency", "Wholesale Sale Price Valid Date", and "Wholesale Sale Price Confirmation Document NO". The right column contains fields for "Wholesale Sale Price Name", "Wholesale Sale Price Producer", "Wholesale Sale Price with TAX(VAT)", "Wholesale Sale Price Metric", "Wholesale Sale Price Invalid Date", and "Wholesale Sale Price Confirmation Document Scan". The form is titled "Wholesale Sale Price" and has a "Return to the dashboard" button in the top right corner.

Added clarification on 25.08.23: To Manage Different Sales Prices it is required to Create **Price Group Module**, where we can create Price Group and assign price group to Consumer Types. Example; Sales Price with Price Group – “State Price” will be assigned to Consumers from State Organizations .

11. For Modules where we have option to create and show different Data we should implement List submenu as default! Example: Chemical Product under this menu we should have List Chemical Products(sub menu) and Create Chemical Product (sub menu). You have implemented this design approach for Region Settings Module, see screenshot.

12. Metric Types Module is not completed!
13. Voucher Module needs to be reviewed and completed accordingly!
14. Consumer Payments needs to be reviewed and completed accordingly!
15. DC Working Shift Management Module is not implemented!
16. Shipment from Producer Page should be reviewed based on the provided Workflow Logic Diagram!
17. Reservoir module should not be placed within Shipment Menu!
18. Remaining Amount in Pipes module should not be placed within Restore Menu!
19. Chemical Lab module should not be placed within Restore Menu!
20. DC Pump module should not be placed within Restore Menu!
21. Authorization Letter for Representative Person Module should be located under Consumer Module

22. Please make sure you implement the Page transition when selecting different Menu links without forcing system to load whole page again each time. See requirements below!

58. Transition between different pages should not be loading whole page structure only load requested module pages(Frame).

59. Sample UI/ UX structure is given below
